ADVOCATE RISING RATE HEDGE ETF

Investment Objective

The Advocate Rising Rate Hedge ETF (the “Fund”) is a multi-asset exchange-traded fund (“ETF”) that seeks to generate capital appreciation during periods of rising long term interest rates, specifically interest rates with maturities of five years or longer.

Fund Fees and Expenses

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund (“Shares”). You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.

Annual Fund Operating Expenses <i>(expenses that you pay each year as a percentage of the value of your investment)</i>	
Management Fee	0.85%
Other Expenses ¹	0.00%
Total Annual Fund Operating Expenses	0.85%

¹ Other Expenses are based on estimated amounts for the current fiscal year.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain at current levels. This example does not include the brokerage commissions that investors may pay to buy and sell Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years
	\$87	\$271

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in total annual Fund operating expenses or in the Example, affect the Fund’s performance. Because the Fund has not commenced operations as of the date of this prospectus, it does not have portfolio turnover information to report.

Principal Investment Strategies

The Fund is actively managed and seeks to achieve its investment objective primarily by investing in a combination of: U.S. Treasury securities; forwards, futures or options on various currencies; long and short positions on the short and long-end of the Treasury or swap yield curve (described below) via futures, swaps, forwards and other over-the-counter (“OTC”) derivatives; long and short positions on equity indexes and/or investment companies, including ETFs; and commodity futures and options.

The Treasury yield curve measures interest rates available in the market for U.S. Treasury obligations of varying maturities from one year through 30 years. The Fund intends to take long and short positions tied to the shape of the Treasury yield curve through the use of interest rate-linked derivative instruments including futures, swaps, forwards and options (in particular, options on futures or interest rate swaps). The Fund may take short positions in instruments that the Adviser expects would decrease in value due to rising rate concerns such as inflation (*e.g.*, a 10-year U.S. Treasury future), and long positions in instruments that the Adviser expects to be less sensitive to rising rate concerns (*e.g.*, a 2-year U.S. Treasury future). This combination of holdings is a “Yield Curve” strategy that may generate capital appreciation in the event that longer-maturity yields rise faster than shorter-maturity yields. The Fund may also implement the Yield Curve strategy through the use of derivative instruments tied to the swap yield curve. The swap yield curve is similar to the Treasury yield curve but reflects the market rates used in interest rate swap agreements at varying maturities. The swap yield curve also provides the Fund with the flexibility to lock in Yield Curve strategies for a longer period of time.

The Fund may invest in foreign currency strategies with respect to currencies that the Adviser believes will depreciate during times of rising interest rates relative to the U.S. dollar. For example, when U.S. interest rates are rising, the difference in the interest rates between the U.S. and other countries, particularly countries that are behind the U.S. in the business cycle, may increase, which would be expected to cause the U.S. dollar to appreciate against those other currencies. In such instances, the Fund may seek capital appreciation by taking a long position in the U.S. dollar and a short position in a foreign currency (*e.g.*, the Japanese Yen). The Fund may also invest in equity markets using sector- or broad-market-focused funds or ETFs, equity index futures or total return swaps. The Fund may take long positions in sectors or indexes that the Adviser expects to benefit from rising rates, short positions in sectors or indexes that the Adviser expects to perform poorly in such environments, or a combination of long and short positions. Under normal circumstances, the Fund may also invest a significant portion of its assets in cash and other instruments for cash management purposes. These other instruments are expected to be predominantly comprised of money-market instruments, Treasury securities, and/or other investment companies, including ETFs, that invest primarily in such instruments.

The Adviser utilizes a proprietary investment process to assemble an investment portfolio for the Fund that is designed to generate positive returns when long-term U.S. interest rates rise. The Adviser’s investment process analyzes asset classes, sectors and currencies to seek out investment opportunities that the Adviser believes will both perform well during periods of rising rates and also maintain a lower “cost of carry” (*i.e.*, the expense incurred to maintain a particular position or portfolio) than outright shorting bonds or buying options. In considering which asset classes will perform well in periods of rising rates, the Adviser considers historical price and interest rate data, as well as the Adviser’s own fundamental analysis of why such asset classes may be expected to outperform in a rising rate environment. The asset classes the Fund may invest in include fixed income, currencies and equities (sector or broad market index). The Fund may utilize derivative instruments to gain exposure to such asset classes, including futures, swaps, currency forwards and options. In selecting such instruments for each given strategy, the Adviser will consider the cost to implement and carry the strategy forward, the ability to lock in the strategy for an extended period of time, and the anticipated liquidity of the underlying investments.

Once the Fund's portfolio is constructed the Adviser will monitor the Fund's positions over time to identify any changes to its historical performance, *i.e.*, a "paradigm shift". The active management of the portfolio allows the Adviser to react to such paradigm shifts and adjust the portfolio accordingly to take this into consideration. The Adviser periodically rebalances the Fund's portfolio to maintain the desired target exposure. Occasionally, market conditions and/or large Fund cash flows may require more frequent adjustment of the exposure. During the rebalancing process, the Adviser may identify securities and other instruments in the portfolio that no longer align with the investment strategies and objective of the Fund and may liquidate such securities or other instruments to better align the portfolio with the Fund's investment strategies and objective. The Adviser expects that the Fund will engage in strategies that are held for an extended period of time (*e.g.*, greater than 12 months), taking into consideration any futures rolls or forward extension transactions as are necessary to maintain certain positions held by the Fund. However, there may be exceptions when the Fund's investments are held for shorter periods of time due to either rapid gain or developing circumstances that may render the strategies invalid to achieve the Fund's investment objective. The Fund may buy and sell investments frequently in seeking to achieve its investment objective. The Adviser does not intend to materially alter the strategic composition of the Fund in response to periods when rates are not rising.

The Fund is classified as "non-diversified" under the Investment Company Act of 1940, as amended (the "1940 Act"), which means that it may invest a larger percentage of its assets in a smaller number of issuers than a diversified fund.

Principal Risks

You could lose money by investing in the Fund. **An investment in the Fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency.** There can be no assurance that the Fund's investment objectives will be achieved.

Market Risk – The prices of and the income generated by the Fund's securities may decline in response to, among other things, investor sentiment, general economic and market conditions, regional or global instability, and currency and interest rate fluctuations. In addition, the impact of any epidemic, pandemic or natural disaster, or widespread fear that such events may occur, could negatively affect the global economy, as well as the economies of individual countries, the financial performance of individual companies and sectors, and the markets in general in significant and unforeseen ways. Any such impact could adversely affect the prices and liquidity of the securities and other instruments in which the Fund invests, which in turn could negatively impact the Fund's performance and cause losses on your investment in the Fund.

Interest Rate Risk – The risk that changes in interest rates will cause significant fluctuations, up or down, in the value of fixed income securities, including Government securities, in which the Fund may take a long position or short position. A historically low interest rate environment may present greater risk of interest rates increasing and rates may increase more rapidly. Conversely, while interest rates remain low, rates could fall further or fall below zero, *i.e.* negative interest rates. Additionally, the difference between long term rates and short term rates can change rapidly and affect the value of the portfolio resulting in gains or losses.

Credit Risk — The risk that the issuer of a security or the counterparty to a contract will default or otherwise become unable to honor a financial obligation.

Derivatives Risk – The Fund's use of futures contracts, forward contracts, options and swaps is subject to market risk, leverage risk, correlation risk and liquidity risk. Leverage risk, liquidity risk and market risk are described elsewhere in this section. Many over-the-counter ("OTC") derivative instruments will not have liquidity beyond the counterparty to the instrument. Correlation risk is the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, rate or index. The Fund's use of forward contracts and swap agreements is also subject to credit risk and valuation risk. Valuation risk is the risk that the derivative may be difficult to value and/or may be valued incorrectly. Credit risk is described elsewhere in this section. Each of these risks could cause the Fund to lose more than the principal amount invested in a derivative instrument. Some derivatives have the potential for unlimited loss, regardless of the size of the Fund's initial investment. The other parties to certain derivative contracts present the same types of credit risk as issuers of fixed income securities. The Fund's use of derivatives may also increase the amount of taxes payable by shareholders. Both U.S. and non-U.S. regulators have adopted and are in the process of implementing regulations governing derivatives markets, the ultimate impact of which remains unclear.

Roll Risk – The Fund may encounter "roll risk" from its investments in futures or swaps. Roll risk refers to the risk that may be encountered when a futures or swap contract must be "rolled forward" as the contracts approaches expiry to maintain the

desired risk profile of the strategy. A roll occurs when a position in the near-term futures or swap contract is liquidated and a new position in the next futures or swap contract is established. Illiquid conditions may arise when the Fund attempts to roll existing positions which could result in either a higher-than-anticipated cost, or an inability to implement the roll. If this situation persists over the typical transition period from an expiring futures or swap contract to the next, the Adviser may elect to terminate the strategy in question and replace it with alternative strategies whose roll risks are currently minimal.

Short Exposure Risk – The Fund may enter into a derivatives transaction to obtain short investment exposure to the reference asset. If the value of the reference asset on which the Fund has obtained a short investment exposure increases, the Fund will incur a loss. This potential loss to the Fund is theoretically unlimited. Gaining short investment exposure through derivatives also subjects the Fund to credit risk, derivatives risk and leverage risk, which are discussed elsewhere in this section.

U.S. Treasury Securities Risk – A security backed by the U.S. Treasury or the full faith and credit of the United States is guaranteed only as to the timely payment of interest and principal when held to maturity, but the market prices for such securities are not guaranteed and will fluctuate.

Investing in the United States Risk – To the extent the Fund invests in issuers within the United States, the Fund may be more susceptible to economic, political, regulatory or other events or conditions affecting issuers within the United States, and may be subject to greater price volatility and risk of loss, than a fund holding more geographically diverse investments.

Management Risk – The Fund is subject to management risk because it is an actively managed portfolio. The Adviser will apply investment techniques and risk analyses in making investment decisions for the Fund, but there can be no guarantee that the Fund will meet its investment objective.

New Fund Risk – Because the Fund is new, investors in the Fund bear the risk that the Fund may not be successful in implementing its investment strategy, may not employ a successful investment strategy, or may fail to attract sufficient assets under management to realize economies of scale, any of which could result in the Fund being liquidated at any time without shareholder approval and at a time that may not be favorable for all shareholders. Such liquidation could have negative tax consequences for shareholders and will cause shareholders to incur expenses of liquidation.

New Adviser Risk — The Adviser has not previously served as an adviser to a registered investment company. As a result, investors do not have a track record of managing an ETF from which to judge the Adviser, and the Adviser may not achieve the intended result in managing the Fund.

Valuation Risk – The risk that a security may be difficult to value. The Fund may value certain securities at a price higher or lower than the price at which they can be sold. This risk may be especially pronounced for investments that are illiquid or may become illiquid.

Liquidity Risk – The risk that certain assets may be difficult or impossible to sell at the time and the price that the Fund would like. The Fund may have to sell the asset at a lower price, sell other securities instead or forego an investment opportunity, any of which could have a negative effect on Fund management or performance.

Inflation-Linked Securities Risk – The value of inflation-linked securities is expected to change in response to changes in real interest rates (the market rate of interest less the anticipated rate of inflation). Real interest rates change over time as a result of many factors, such as currency exchange rates, central bank monetary policies and general economic conditions. In general, the price of an inflation-linked security tends to decline when real interest rates increase. Unlike conventional bonds, the principal and interest payments of inflation-protected securities such as TIPS are adjusted periodically to a specified rate of inflation (e.g. the Consumer Price Index (the “CPI”). There can be no assurance that the inflation index used will accurately measure the actual rate of inflation. These securities may lose value in the event that the actual rate of inflation is different than the rate of the inflation index. Repayment of the original bond principal upon maturity (as adjusted for inflation) is guaranteed in the case of TIPS. For bonds that do not provide a similar guarantee, the adjusted principal value of the bond repaid at maturity may be less than the original principal.

ETF Risks – The Fund is an ETF and, as a result of this structure, it is exposed to the following risks:

Trading Risk – Shares of the Fund may trade on the Exchange above or below their NAV. The NAV of shares of the Fund will fluctuate with changes in the market value of the Fund’s holdings. In addition, although the Fund’s shares are currently listed on the Exchange, there can be no assurance that an active trading market for shares will develop or be maintained. Trading in Fund shares may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in shares of the Fund inadvisable.

Cash Transactions Risk – Like other ETFs, the Fund sells and redeems its shares only in large blocks called Creation Units and only to “Authorized Participants.” Unlike many other ETFs, however, the Fund expects to effect its creations and redemptions at least partially for cash, rather than in-kind securities. Thus, an investment in the Fund may be less tax-efficient than an investment in other ETFs as the Fund may recognize a capital gain that it could have avoided by making redemptions in-kind. As a result, the Fund may pay out higher capital gains distributions than ETFs that redeem in-kind. Further, paying redemption proceeds at least partially in cash rather than through in-kind delivery of portfolio securities may require the Fund to dispose of or sell portfolio investments to obtain the cash needed to distribute redemption proceeds at an inopportune time.

Limited Authorized Participants, Market Makers and Liquidity Providers Risk – Because the Fund is an ETF, only a limited number of institutional investors (known as “Authorized Participants”) are authorized to purchase and redeem shares directly from the Fund. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Fund shares may trade at a material discount to net asset value (“NAV”) and possibly face delisting: (i) Authorized Participants exit the business or otherwise become unable to process creation and/or redemption orders and no other Authorized Participants step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Investments in Investment Companies Risk – When the Fund invests in an investment company, including ETFs, in addition to directly bearing the expenses associated with its own operations, it will bear a pro rata portion of the investment company’s expenses. Further, while the risks of owning shares of an investment company generally reflect the risks of owning the underlying investments of the investment company, the Fund may be subject to additional or different risks than if the Fund had invested directly in the underlying investments. For example, the lack of liquidity in an ETF could result in its share price being more volatile than that of the underlying portfolio securities.

Money Market Instruments Risk – The value of money market instruments may be affected by changing interest rates and by changes in the credit ratings of the investments. An investment in a money market fund is not a bank deposit and is not insured or guaranteed by any bank, the FDIC or any other government agency. A money market fund’s sponsor has no legal obligation to provide financial support to the fund, and there should be no expectation that the sponsor will provide financial support to the fund at any time. Certain money market funds float their net asset value while others seek to preserve the value of investments at a stable net asset value (typically, \$1.00 per share). An investment in a money market fund, even an investment in a fund seeking to maintain a stable NAV per share, is not guaranteed and it is possible for the Fund to lose money by investing in these and other types of money market funds.

Non-Diversification Risk – The Fund is classified as “non-diversified,” which means it may invest a larger percentage of its assets in a smaller number of issuers than a diversified fund. To the extent that the Fund invests its assets in a smaller number of issuers, the Fund will be more susceptible to negative events affecting those issuers than a diversified fund. However, the Fund intends to satisfy the asset diversification requirements for qualifying as a regulated investment company (“RIC”) under Subchapter M of the Internal Revenue Code of 1986, as amended (the “Code”).

Proprietary Model Risk – Proprietary models that may be used to evaluate securities or securities markets are based on certain assumptions concerning the interplay of market factors and may not adequately take into account certain factors and may result in the Fund having a lower return than if the Fund were managed using another model or investment strategy. The markets or prices of individual securities may be affected by factors not foreseen in developing the models.

Commodity-Related Investments Risk – Exposure to commodities through investments such as commodity futures contracts and options (collectively, “Commodity-Related Investments”) may subject the Fund to greater volatility than investments in traditional securities. Prices of commodities may fluctuate significantly over short periods for a variety of factors, including: changes in supply and demand relationships, changes in interest or currency exchange rates, population growth and changing demographics and factors affecting a particular industry or commodity, such as drought, floods or other weather conditions, transportation bottlenecks or shortages, competition from substitute products, fiscal, monetary and exchange control programs, disease, pestilence, acts of terrorism, embargoes, tariffs and international economic, political, military, legal and regulatory developments.

Tax Risk — In order to qualify for the favorable U.S. federal income tax treatment accorded to a RIC, the Fund must, amongst other requirements, derive at least 90% of its gross income in each taxable year from certain categories of income (“qualifying income”). Certain of the Fund’s Commodity-Related Investments will not generate income that is qualifying income. If the Fund was to fail to meet the qualifying income test and fail to qualify as a RIC, it would be taxed in the same manner as an ordinary corporation, and distributions to its shareholders would not be deductible by the Fund in computing its taxable income. The failure by the Fund to qualify as a RIC would have significant negative tax consequences to Fund shareholders and would affect a shareholder’s return on its investment in the Fund. Under certain circumstances, the Fund may be able to cure a failure to meet the qualifying income test if such failure was due to reasonable cause and not willful neglect, but in order to do so the Fund may incur significant fund-level taxes, which would effectively reduce (and could eliminate) the Fund’s returns.

Portfolio Turnover Risk — Due to its investment strategy, the Fund may buy and sell securities frequently. This may result in higher transaction costs and additional capital gains tax liabilities, which may affect the Fund’s performance.

The Fund’s shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.

Performance Information

As of the date of this prospectus, the Fund has been in operation for less than one full calendar year and therefore does not report its performance information. Once available, the Fund’s performance information will be accessible on the Fund’s website at www.advocatecapmgt.com and will provide some indication of the risks of investing in the Fund.

Investment Adviser

Advocate Capital Management, LLC serves as the investment adviser to the Fund.

Portfolio Manager

Scott Peng, PhD., Founder, Chief Executive Officer and Chief Investment Officer, has managed the Fund since 2021.

Mr. Peng is primarily responsible for the day-to-day management of the Fund and has served in such capacity since the Fund's inception in 2021.

Purchase and Sale of Fund Shares

The Fund issues shares to (or redeems shares from) certain institutional investors known as "Authorized Participants" (typically market makers or other broker-dealers) only in large blocks of shares known as "Creation Units." Creation Unit transactions are conducted in exchange for the deposit or delivery of a portfolio of in-kind securities designated by the Fund and/or cash.

Individual shares of the Fund may only be purchased and sold on the Exchange, other national securities exchanges, electronic crossing networks and other alternative trading systems through your broker-dealer at market prices. Because Fund shares trade at market prices rather than at NAV, Fund shares may trade at a price greater than NAV (premium) or less than NAV (discount). When buying or selling shares in the secondary market, you may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) (the "bid-ask spread"). When available, recent information regarding the Fund's NAV, market price, premiums and discounts, and bid-ask spreads will be available at www.advocatecapmgt.com.

Tax Information

The Fund intends to make distributions that may be taxed as ordinary income or capital gains, unless you are investing through a tax-deferred arrangement, such as a 401(k) plan or individual retirement account ("IRA"), in which case your distribution will be taxed when withdrawn from the tax-deferred account.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase shares of the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's web site for more information.

More Information about the Fund's Investment Objective and Strategies

The Fund is a multi-asset ETF that seeks to generate gains during periods of rising interest rates, predominantly long-term interest rates. The Fund is actively managed and seeks to achieve its investment objective primarily by investing in a combination of: U.S. Treasury securities; forwards, futures or options on various currencies; long and short positions on the short and long-end of the Treasury or swap yield curve (described below) via futures, swaps, forwards and other over-the-counter ("OTC") derivatives; long and short positions on equity indexes and/or investment companies, including ETFs; and commodity futures and options.

The Treasury yield curve measures interest rates available in the market for U.S. Treasury obligations of varying maturities from one year through 30 years. The Fund intends to take long and short positions tied to the shape of the Treasury yield curve through the use of interest rate-linked derivative instruments including futures, swaps, forwards and options (in particular, options on futures or interest rate swaps). The Fund may take short positions in instruments that the Adviser expects would decrease in value due to rising rate concerns such as inflation (e.g., a 10-year U.S. Treasury future), and long positions in instruments that the Adviser expects to be less sensitive to rising rate concerns (e.g., a 2-year U.S. Treasury future). This combination of holdings is a “Yield Curve” strategy that may generate capital appreciation in the event that longer-maturity yields rise faster than shorter-maturity yields. The Fund may also implement the Yield Curve strategy through the use of derivative instruments tied to the swap yield curve. The swap yield curve is similar to the Treasury yield curve but reflects the market rates used in interest rate swap agreements at varying maturities. The swap yield curve also provides the Fund with the flexibility to lock in Yield Curve strategies for a longer period of time.

The Fund will generally aim to maintain a short position in financial instruments with long-term maturities because when interest rates rise in a particular part of the yield curve, the price of a bond in that part of the yield curve declines. The Adviser expects that shorting a 10-year Treasury bond when 10-year Treasury yield rises (for instance, through the futures or swaps market) would generate capital appreciation as the price of the bond declines (due to rising rates) from the initial entry price of the short position. Just as shorting a bond may generate capital appreciation when rates rise, shorting 10-year Treasury futures would be expected to produce capital appreciation if interest rates rise, as higher interest rates result in lower bond and bond futures prices.

The Fund may invest in foreign currency strategies with respect to currencies that the Adviser believes will depreciate during times of rising interest rates relative to the U.S. dollar. For example, when U.S. interest rates are rising, the difference in the interest rates between the U.S. and other countries, particularly countries that are behind the U.S. in the business cycle, may increase, which would be expected to cause the U.S. dollar to appreciate against those other currencies. In such instances, the Fund may seek capital appreciation by taking a long position in the U.S. dollar and a short position in a foreign currency (e.g., the Japanese Yen). The Fund may also invest in equity markets using sector- or broad-market-focused funds or ETFs, equity index futures or total return swaps. The Fund may take long positions in sectors or indexes that the Adviser expects to benefit from rising rates, short positions in sectors or indexes that the Adviser expects to perform poorly in such environments, or a combination of long and short positions. Under normal circumstances, the Fund may also invest a significant portion of its assets in cash and other instruments for cash management purposes. These other instruments are expected to be predominantly comprised of money-market instruments, Treasury securities, and/or other investment companies, including ETFs, that invest primarily in such instruments.

The Adviser utilizes a proprietary investment process to assemble an investment portfolio for the Fund that is designed to generate positive returns when long-term U.S. interest rates rise. The Adviser’s investment process analyzes asset classes, sectors and currencies to seek out investment opportunities that the Adviser believes will both perform well during periods of rising rates and also maintain a lower “cost of carry” (i.e., the expense incurred to maintain a particular position or portfolio) than outright shorting bonds or buying options. The Adviser will not take a position on when or if interest rates will rise, so the low “cost of carry” element of the portfolio construction aims to maintain an ongoing hedge against the risk of rising rates. In considering which asset classes will perform well in periods of rising rates, the Adviser considers historical price and interest rate data, as well as the Adviser’s own fundamental analysis of why such asset classes may be expected to outperform in a rising rate environment. The asset classes the Fund may invest in include fixed income, currencies and equities (sector or broad market index). The Fund may utilize derivative instruments to gain exposure to such asset classes, including futures, swaps, currency forwards and options. In selecting such instruments for each given strategy, the Adviser will consider the cost to implement and carry the strategy forward, the ability to lock in the strategy for an extended period of time, and the anticipated liquidity of the underlying investments.

Once the Fund's portfolio is constructed the Adviser will monitor the Fund's positions over time to identify any changes to its historical performance, i.e., a "paradigm shift". The active management of the portfolio allows the Adviser to react to such paradigm shifts and adjust the portfolio accordingly to take this into consideration. The Adviser seeks investments that it believes will outperform in both rising rate and falling rate environments. The Fund may also invest in option-based versions of the strategies described herein but it is the Adviser's expectation that options would constitute a minority of the portfolio given their high inherent decay cost (*i.e.*, the decline in the value of a contract over the passage of time). The Adviser periodically rebalances the Fund's portfolio to maintain the desired target exposure. Occasionally, market conditions and/or large Fund cash flows may require more frequent adjustment of the exposure. During the rebalancing process, the Adviser may identify securities and other instruments in the portfolio that no longer align with the investment strategies and objective of the Fund and may liquidate such securities or other instruments to better align the portfolio with the Fund's investment strategies and objective. The Adviser expects that the Fund will engage in strategies that are held for an extended period of time (*e.g.*, greater than 12 months), taking into consideration any futures rolls or forward extension transactions as are necessary to maintain certain positions held by the Fund. However, there may be exceptions when the Fund's investments are held for shorter periods of time due to either rapid gain or developing circumstances that may render the strategies invalid to achieve the Fund's investment objective. The Fund may buy and sell investments frequently in seeking to achieve its investment objective. The Adviser does not intend to materially alter the strategic composition of the Fund in response to periods when rates are not rising.

The Fund is classified as "non-diversified" under the 1940 Act, which means that it may invest a larger percentage of its assets in a smaller number of issuers than a diversified fund.

The Fund's investment objective and each of the policies described herein are non-fundamental policies that may be changed by the Board of Trustees of the Trust (the "*Board*") without shareholder approval. The Fund may liquidate and terminate at any time without shareholder approval. From time to time, the Fund may take temporary defensive positions that are inconsistent with its investment strategies in attempting to respond to poor market liquidity, adverse markets, economic, political, or other conditions. In such instances, the Fund may hold up to 100% of its assets in cash; short-term U.S. government securities and government agency securities; investment-grade money-market instruments; money-market mutual funds; investment-grade fixed income securities; repurchase agreements; commercial paper; cash equivalents; and ETFs that principally invest in the foregoing instruments. However, the Adviser will not seek to actively time market movements. As a result of engaging in these temporary measures, the Fund may not achieve its investment objective. In addition, the Fund may be more volatile than a fund holding only long positions in intermediate or long-maturity U.S. government bonds.

The Fund's ability to invest in other investment companies is limited by the 1940 Act and the related rules and interpretations. The Fund has adopted a policy that it will not invest in other investment companies in excess of 1940 Act limits in reliance on Sections 12(d)(1)(F) or 12(d)(1)(G) of the 1940 Act.

More Information about Risk

Risk is inherent in all investing. Investing in the Fund involves risk, including the risk that you may lose all or part of your investment. There can be no assurance that the Fund will meet its stated objective. Before you invest, you should consider the following supplemental disclosure pertaining to the Principal Risks set forth above as well as additional Non-Principal Risks set forth below in this prospectus.

Market Risk — The risk that the market value of an investment may move up and down, sometimes rapidly and unpredictably. The Fund's net asset value ("NAV") per share will fluctuate with the market prices of its portfolio securities. Market risk may affect a single issuer, an industry, a sector or the equity or bond market as a whole. Markets for securities in which the Fund invests may decline significantly in response to adverse issuer, political, regulatory, market, economic or other developments that may cause broad changes in market value, public perceptions concerning these developments, and adverse investor sentiment or publicity. Similarly, the impact of any epidemic, pandemic or natural disaster, or widespread fear that such events may occur, could negatively affect the global economy, as well as the economies of individual countries, the financial performance of individual companies and sectors, and the markets in general in significant and unforeseen ways. Any such impact could adversely affect the prices and liquidity of the securities and other instruments in which the Fund invests, which in turn could negatively impact the Fund's performance and cause losses on your investment in the Fund. Recent examples include pandemic risks related to COVID-19 and aggressive measures taken worldwide in response by governments, including closing borders, restricting international and domestic travel, and the imposition of prolonged quarantines of large populations, and by businesses, including changes to operations and reducing staff. The impact of the COVID-19 pandemic may be short term or may last for an extended period of time, and in either case could result in a substantial economic downturn or recession.

Interest Rate Risk — The risk that changes in interest rates will cause significant fluctuations, up or down, in the value of fixed income securities, including Government securities, in which the Fund may take a long position or short position. A historically low interest rate environment may present greater risk of interest rates increasing and rates may increase more rapidly. Conversely, while interest rates remain low, rates could fall further or fall below zero, i.e. negative interest rates. Additionally, the difference between long term rates and short term rates can change rapidly and affect the value of the portfolio resulting in gains or losses.

Credit Risk — Credit risk is the risk that a decline in the credit quality of an investment could cause the Fund to lose money. The Fund could lose money if the issuer or guarantor of a portfolio security or a counterparty to a derivative contract fails to make timely payment or otherwise honor its obligations.

Derivatives Risk — The Fund's use of futures contracts, forward contracts, options and swaps is subject to derivatives risk. Derivatives are often more volatile than other investments and may magnify the Fund's gains or losses. There are various factors that affect the Fund's ability to achieve its objective with derivatives. Successful use of a derivative depends upon the degree to which prices of the underlying assets correlate with price movements in the derivatives the Fund buys or sells. The Fund could be negatively affected if the change in market value of its securities fails to correlate perfectly or at all with the values of the derivatives it purchased or sold. The lack of a liquid secondary market for a derivative may prevent the Fund from closing its derivative positions and could adversely impact its ability to achieve its investment objective(s) or to realize profits or limit losses. Since derivatives may be purchased for a fraction of their value, a relatively small price movement in a derivative may result in an immediate and substantial loss or gain to the Fund. Derivatives are often more volatile than other investments and the Fund may lose more in a derivative than it originally invested in it. There can be no assurance that the Adviser's use of derivatives will be successful in achieving its intended goals. Additionally, some derivative instruments are subject to counterparty risk, meaning that the party that issues the derivative may experience a significant credit event and may be unwilling or unable to make timely settlement payments or otherwise honor its obligations.

Forward Contracts. A forward contract involves a negotiated obligation to purchase or sell a specific security or currency at a future date (with or without delivery required), which may be any fixed number of days from the date of the contract agreed upon by the parties, at a price set at the time of the contract. Forward contracts are not traded on exchanges; rather, a bank or dealer will act as agent or as principal in order to make or take future delivery of a specified lot of a particular security or currency for the Fund's account. Risks associated with forwards may include: (i) an imperfect correlation between the movement in prices of forward contracts and the securities or currencies underlying them; (ii) an illiquid market for forwards; (iii) difficulty in obtaining an accurate value for the forwards; and (iv) the risk that the counterparty to the forward contract will default or otherwise fail to honor its obligation. Because forwards require only a small initial investment in the form of a deposit or margin, they also involve a high degree of leverage.

Futures Contracts. Futures contracts provide for the future sale by one party and purchase by another party of a specified amount of a specific security or asset at a specified future time and at a specified price. The risks of futures include: (i) leverage risk; (ii) correlation risk and (iii) liquidity risk. Because futures require only a small initial investment in the form of a deposit or margin, they involve a high degree of leverage. Accordingly, the fluctuation of the value of futures in relation to the underlying assets upon which they are based is magnified. Thus, the Fund may experience losses that exceed losses experienced by funds that do not use futures contracts. There may be imperfect correlation, or even no correlation, between price movements of a futures contract and price movements of investments for which futures are used as a substitute, or which futures are intended to hedge. Lack of correlation (or tracking) may be due to factors unrelated to the value of the investments being substituted or hedged, such as speculative or other pressures on the markets in which these instruments are traded. Consequently, the effectiveness of futures as a security substitute or as a hedging vehicle will depend, in part, on the degree of correlation between price movements in the futures and price movements in underlying securities or assets.

While futures contracts are generally liquid instruments, under certain market conditions they may become illiquid. For example, futures exchanges may impose daily or intra-day price change limits and/or limit the volume of trading. Additionally, government regulation may further reduce liquidity through similar trading restrictions. As a result, the Fund may be unable to close out its futures contracts at a time that is advantageous.

Options. Options involve the payment or receipt of a premium by the investor and the corresponding right or obligation, as the case may be, to either purchase or sell the underlying instrument for a specific price at a certain time or during a certain period. Purchasing options involves the risk that the underlying instrument will not change price in the manner expected, so that the investor loses its premium. Selling options involves potentially greater risk because the investor is exposed to the extent of the actual price movement in the underlying instrument rather than only the premium payment received (which could result in a potentially unlimited loss). If the Fund writes a "covered" call option (i.e., a call option on a security in which the Fund holds a long position), the Fund may not participate fully in a rise in market value of the underlying security. If the Fund writes a "covered" put option (i.e., a put option on a security in which the Fund holds a short position), the Fund may not participate fully in a decline in market value of the underlying security. Over-the-counter options also involve counterparty risk.

Swaps. In a swap transaction, two parties agree to exchange the returns, differentials in rates of return or some other amount earned or realized on the “notional amount” of predetermined investments or instruments, which may be adjusted for an interest factor. Swaps can involve greater risks than direct investment in securities, because swaps may be leveraged and are subject to counterparty risk and valuation risk. Swaps may also be considered illiquid. It may not be possible for the Fund to liquidate a swap position at an advantageous time or price, which may result in significant losses.

Total return swaps are contracts that obligate a party to pay interest in exchange for payment by the other party of the total return generated by a security, a basket of securities, an index or an index component. Total return swaps give the Fund the right to receive the appreciation in the value of a specified security, index or other instrument in return for a fee paid to the counterparty, which will typically be an agreed upon interest rate. If the underlying asset in a total return swap declines in value over the term of the swap, the Fund may also be required to pay the dollar value of that decline to the counterparty.

Short Sale Exposure Risk — The Fund may seek “short” exposure to certain securities through derivative transactions, which may cause the Fund to be exposed to certain risks associated with selling securities short. These risks include, under certain market conditions, an increase in the volatility and decrease in the liquidity of securities underlying the short position, which may lower the Fund’s return, result in a loss, have the effect of limiting the Fund’s ability to obtain exposure through financial instruments, or require the Fund to seek exposure through alternative investment strategies that may be less desirable or more costly to implement. To the extent that, at any particular point in time, the securities underlying the short position may be thinly traded or have a limited market, including due to regulatory action, the Fund may be unable to meet its investment objective due to a lack of available securities or counterparties. Obtaining short exposure through these instruments may be considered an aggressive investment technique. Any income, dividends or payments by the assets underlying the Fund’s short positions will negatively impact the Fund.

U.S. Treasury Securities Risk — A security backed by the U.S. Treasury or the full faith and credit of the United States is guaranteed only as to the timely payment of interest and principal when held to maturity, but the market prices for such securities are not guaranteed and will fluctuate.

Investing in the United States Risk — The Fund focuses its investments in the United States. As a result, the Fund may be more susceptible to economic, political, regulatory or other events or conditions affecting issuers within the United States, and may be subject to greater price volatility and risk of loss, than a fund holding more geographically diverse investments.

Active Management Risk — The Fund is subject to the risk that the Adviser’s judgments about the attractiveness, value, or potential appreciation of the Fund’s investments may prove to be incorrect. If the investments selected and strategies employed by the Fund fail to produce the intended results, the Fund could underperform in comparison to other funds with similar objectives and investment strategies.

New Fund Risk — Because the Fund is new, investors in the Fund bear the risk that the Fund may not be successful in implementing its investment strategy, may not employ a successful investment strategy, or may fail to attract sufficient assets under management to realize economies of scale, any of which could result in the Fund being liquidated at any time without shareholder approval and at a time that may not be favorable for all shareholders. Such liquidation could have negative tax consequences for shareholders and will cause shareholders to incur expenses of liquidation.

Valuation Risk — The risk that a security may be difficult to value. The Fund may value certain securities at a price higher or lower than the price at which they can be sold. This risk may be especially pronounced for investments that are illiquid or may become illiquid.

Liquidity Risk — The risk that certain assets may be difficult or impossible to sell at the time and the price that the Fund would like. The Fund may have to sell the asset at a lower price, sell other securities instead or forego an investment opportunity, any of which could have a negative effect on Fund management or performance.

Inflation-Linked Securities Risk — The value of inflation-linked securities is expected to change in response to changes in real interest rates (the market rate of interest less the anticipated rate of inflation). Real interest rates change over time as a result of many factors, such as currency exchange rates, central bank monetary policies and general economic conditions. In general, the price of an inflation-linked security tends to decrease when real interest rates increase and can increase when real interest rates decrease. Interest payments on inflation-linked securities are unpredictable and will fluctuate as the principal and interest are adjusted for inflation. Any increase in the principal amount of an inflation-linked debt security will be considered taxable ordinary income, even though the Fund will not receive the principal until maturity. Repayment of the original bond principal upon maturity (as adjusted for inflation) is guaranteed in the case of TIPS. For bonds that do not provide a similar guarantee, the adjusted principal value of the bond repaid at maturity may be less than the original principal.

There can also be no assurance that the inflation index used will accurately measure the real rate of inflation in the prices of goods and services. The Fund’s investments in inflation-linked securities may lose value in the event that the actual rate of inflation is different than the rate of the inflation index. In addition, inflation-linked securities are subject to the risk that the CPI or other relevant pricing index may be discontinued, fundamentally altered in a manner materially adverse to the interests of an investor in the securities, altered by legislation or Executive Order in a materially adverse manner to the interests of an investor in the securities or substituted with an alternative index.

ETF Risks — The Fund is an ETF and, as a result of this structure, it is exposed to the following risks:

Trading Risk — Although Fund shares are listed for trading on a listing exchange, there can be no assurance that an active trading market for such shares will develop or be maintained. Secondary market trading in the Fund’s shares may be halted by a listing exchange because of market conditions or for other reasons. In addition, trading in the Fund’s shares is subject to trading halts caused by extraordinary market volatility pursuant to “circuit breaker” rules. There can be no assurance that the requirements necessary to maintain the listing of the Fund’s shares will continue to be met or will remain unchanged.

Shares of the Fund may trade at, above or below their most recent NAV. The per share NAV of the Fund is calculated at the end of each business day and fluctuates with changes in the market value of the Fund’s holdings since the prior most recent calculation. The trading prices of the Fund’s shares will fluctuate continuously throughout trading hours based on market supply and demand. The trading prices of the Fund’s shares may deviate significantly from NAV during periods of market volatility. These factors, among others, may lead to the Fund’s shares trading at a premium or discount to NAV. However, given that shares can be created and redeemed only in Creation Units at NAV, the Adviser does not believe that large discounts or premiums to NAV will exist for extended periods of time. While the creation/redemption feature is designed to make it likely that the Fund’s shares normally will trade close to the Fund’s NAV, exchange prices are not expected to correlate exactly with the Fund’s NAV due to timing reasons as well as market supply and demand factors. In addition, disruptions to creations and redemptions or the existence of extreme volatility may result in trading prices that differ significantly from NAV. If a shareholder purchases at a time when the market price of the Fund is at a premium to its NAV or sells at time when the market price is at a discount to the NAV, the shareholder may sustain losses.

Investors buying or selling shares of the Fund in the secondary market will pay brokerage commissions or other charges imposed by brokers as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of shares. In addition, secondary market investors will also incur the cost of the difference between the price that an investor is willing to pay for shares (the “bid” price) and the price at which an investor is willing to sell shares (the “ask” price). This difference in bid and ask prices is often referred to as the “spread” or “bid/ask spread.” The bid/ask spread varies over time for shares based on trading volume and market liquidity, and is generally lower if the Fund’s shares have more trading volume and market liquidity and higher if the Fund’s shares have little trading volume and market liquidity. Further, increased market volatility may cause increased bid/ask spreads. Due to the costs of buying or selling shares of the Fund, including bid/ask spreads, frequent trading of such shares may significantly reduce investment results and an investment in the Fund’s shares may not be advisable for investors who anticipate regularly making small investments.

Cash Transactions Risk — Like other ETFs, the Fund sells and redeems its shares only in large blocks called Creation Units and only to “Authorized Participants.” Unlike many other ETFs, however, the Fund expects to effect its creations and redemptions at least partially for cash, rather than in-kind securities. Thus, an investment in the Fund may be less tax-efficient than an investment in other ETFs as the Fund may recognize a capital gain that it could have avoided by making redemptions in-kind. As a result, the Fund may pay out higher capital gains distributions than ETFs that redeem in-kind. Further, paying redemption proceeds at least partially in cash rather than through in-kind delivery of portfolio securities may require the Fund to dispose of or sell portfolio investments to obtain the cash needed to distribute redemption proceeds at an inopportune time.

Limited Authorized Participants, Market Makers and Liquidity Providers Risk — Only an Authorized Participant may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of financial institutions that may act as Authorized Participants. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Fund shares may trade at a material discount to NAV and possibly face delisting: (i) Authorized Participants exit the business or otherwise become unable to process creation and/or redemption orders and no other Authorized Participants step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions. An active trading market for shares of the Fund may not develop or be maintained, and, particularly during times of market stress, Authorized Participants or market makers may step away from their respective roles in making a market in shares of the Fund and in executing purchase or redemption orders. This could, in turn, lead to variances between the market price of the Fund's shares and the value of its underlying securities.

Investments in Investment Companies Risk — The Fund may purchase shares of investment companies. When the Fund invests in an investment company, it will bear a pro rata portion of the investment company's expenses in addition to directly bearing the expenses associated with its own operations. Such expenses may make owning shares of an investment company more costly than owning the underlying securities directly. In part because of these additional expenses, the performance of an investment company may differ from the performance the Fund would achieve if it invested directly in the underlying investments of the investment company. In addition, while the risks of owning shares of an investment company generally reflect the risks of owning the underlying investments of the investment company, the Fund may be subject to additional or different risks than if the Fund had invested directly in the underlying investments.

ETFs — ETFs are pooled investment vehicles whose shares are listed and traded on U.S. and non-U.S. stock exchanges. To the extent that the Fund invests in ETFs, the Fund will be subject to substantially the same risks as those associated with the direct ownership of the securities in which the ETF invests, and the value of the Fund's investment will fluctuate in response to the performance of the ETF's holdings. ETFs typically incur fees that are separate from those of the Fund. Accordingly, the Fund's investments in ETFs will result in the layering of expenses such that shareholders will indirectly bear a proportionate share of the ETFs' operating expenses, in addition to paying Fund expenses. Because the value of ETF shares depends on the demand in the market, shares may trade at a discount or premium to their NAV and the Adviser may not be able to liquidate the Fund's holdings at the most optimal time, which could adversely affect the Fund's performance.

Money Market Instruments Risk — The value of money market instruments may be affected by changing interest rates and by changes in the credit ratings of the investments. An investment in a money market fund is not a bank deposit and is not insured or guaranteed by any bank, the FDIC or any other government agency. A money market fund's sponsor has no legal obligation to provide financial support to the fund, and there should be no expectation that the sponsor will provide financial support to the fund at any time. Certain money market funds float their net asset value while others seek to preserve the value of investments at a stable net asset value (typically, \$1.00 per share). An investment in a money market fund, even an investment in a fund seeking to maintain a stable net asset value per share, is not guaranteed and it is possible for the Fund to lose money by investing in these and other types of money market funds. If the liquidity of a money market fund's portfolio deteriorates below certain levels, the money market fund may suspend redemptions (i.e., impose a redemption gate) and thereby prevent the Fund from selling its investment in the money market fund or impose a fee of up to 2% on amounts the Fund redeems from the money market fund (i.e., impose a liquidity fee). These measures may result in an investment loss or prohibit the Fund from redeeming shares when the Adviser would otherwise redeem shares. Money market funds and the securities they invest in are subject to comprehensive regulations. The enactment of new legislation or regulations, as well as changes in interpretation and enforcement of current laws, may affect the manner of operation, performance and/or yield of money market funds.

Non-Diversification Risk — Because the Fund is non-diversified and can invest a greater portion of its assets in securities of individual issuers than a diversified fund, changes in the market value of a single investment could cause greater fluctuations in Share price than would occur in a diversified fund. This may increase the Fund’s volatility and cause the performance of a relatively small number of issuers to have a greater impact on the Fund’s performance. However, the Fund intends to satisfy the asset diversification requirements for qualifying as a RIC under Subchapter M of the Code.

Proprietary Model Risk — Proprietary models that may be used to evaluate securities or securities markets are based on certain assumptions concerning the interplay of market factors and may not adequately take into account certain factors and may result in the Fund having a lower return than if the Fund were managed using another model or investment strategy. The markets or prices of individual securities may be affected by factors not foreseen in developing the models.

Commodity-Related Investments Risk — Exposure to the commodities markets through Commodity-Related Investments may subject the Fund to greater volatility than investments in traditional securities. Prices of commodities may fluctuate significantly over short periods for a variety of factors, including: changes in supply and demand relationships, changes in interest or currency exchange rates, population growth and changing demographics and factors affecting a particular industry or commodity, such as drought, floods or other weather conditions, transportation bottlenecks or shortages, competition from substitute products, fiscal, monetary and exchange control programs, disease, pestilence, acts of terrorism, embargoes, tariffs and international economic, political, military, legal and regulatory developments. Additionally, the value of Commodity-Related Investments may be influenced by, among other things, time to maturity, level of supply and demand for the instrument, interest rates, volatility and lack of liquidity in underlying markets, the performance of the reference commodity or instrument, changes in the issuer’s credit rating and economic, legal, political or geographic events that affect the reference commodity or instrument. Further, a lack of liquidity, participation of speculators and government regulation and intervention, among other factors, may subject commodity markets to temporary distortions or other disruptions, which may, in turn, subject the Fund to losses. In addition, exposure to the commodities markets through Commodity-Related Investments may subject the Fund to certain tax risks, which are discussed below.

Tax Risk — In order to qualify for the favorable U.S. federal income tax treatment accorded to a RIC, the Fund must, amongst other requirements, derive at least 90% of its gross income in each taxable year from certain categories of income (“qualifying income”). Certain of the Fund’s Commodity-Related Investments will not generate income that is qualifying income. The Fund will seek to restrict its income from such investments that do not generate qualifying income to a maximum of 10% of its gross income (when combined with its other investments that produce non-qualifying income) to comply with the qualifying income test (as described in detail in the SAI) necessary for the Fund to qualify as a RIC. However, the Fund might generate more non-qualifying income than anticipated, might not be able to generate qualifying income in a particular taxable year at levels sufficient to meet the qualifying income test, or might not be able to determine the percentage of qualifying income it derives for a taxable year until after year-end. Accordingly, the extent to which the Fund invests in commodities or commodity-linked derivatives directly may be limited by the qualifying income test, which the Fund must continue to satisfy to maintain its status as a RIC. As such, the Fund could be required to reduce its exposure to such investments, which may result in difficulty in implementing the Fund’s investment strategy. If the Fund was to fail to meet the qualifying income test and fail to qualify as a RIC, it would be taxed in the same manner as an ordinary corporation, and distributions to its shareholders would not be deductible by the Fund in computing its taxable income. The failure by the Fund to qualify as a RIC would have significant negative tax consequences to Fund shareholders and would affect a shareholder’s return on its investment in the Fund. Under certain circumstances, the Fund may be able to cure a failure to meet the qualifying income test if such failure was due to reasonable cause and not willful neglect, but in order to do so, the Fund may incur significant fund-level taxes, which would effectively reduce (and could eliminate) the Fund’s returns.

Information about Portfolio Holdings

A description of the Fund's policies and procedures with respect to the circumstances under which the Fund discloses its portfolio holdings is available in the Statement of Additional Information ("SAI").

Investment Adviser

The Trust, on behalf of the Fund has entered into an investment advisory agreement (the "Investment Management Agreement") with Advocate Capital Management, LLC, located at 499 Park Ave, Tenth Floor, New York, NY 10022, under which the Adviser manages the Fund's investments subject to the supervision of the Board.

The Adviser makes investment decisions for the Fund and continuously reviews, supervises and administers the Fund's investment program. The Board supervises the Adviser and establishes policies that the Adviser must follow in its management activities. For its services to the Fund, the Adviser is entitled to a fee, which is calculated daily and paid monthly, at an annual rate of 0.85% of the average daily net assets of the Fund. As of October 12, 2021, the Adviser had approximately \$6.2 billion in assets under advisory contract.

Pursuant to the Investment Management Agreement, the Fund has agreed to pay an annual unitary management fee to the Adviser in an amount equal to 0.85% of its average daily net assets. This unitary management fee is designed to pay the Fund's expenses and to compensate the Adviser for the services it provides to the Fund. Out of the unitary management fee, the Adviser pays substantially all expenses of the Fund, including the cost of transfer agency, custody, fund administration, legal, audit, sub-advisory fees, and other service and license fees. However, the Adviser is not responsible for distribution and service fees payable pursuant to a Rule 12b-1 plan, if any, brokerage commissions and other expenses connected with the execution of portfolio transactions, taxes and any accrued deferred tax, interest, and extraordinary expenses.

A discussion regarding the basis for the Board's approval of the Investment Management Agreement on behalf of the Fund will be available in the Fund's first Annual or Semi-Annual Report to Shareholders. The Adviser has registered with the National Futures Association as a "commodity pool operator" under the Commodities Exchange Act with respect to the Fund. Additional information regarding the Adviser's status as a commodity pool operator with respect to the Fund is included in the SAI.

Portfolio Manager

Scott Peng, PhD., Founder, Chief Executive Officer and Chief Investment Officer has managed the Fund since 2021. Prior to founding the Adviser in 2016, he was head of Portfolio Solutions at Secor Asset Management. Mr. Peng was previously a Managing Director and Head of the Portfolio Solutions Group at Credit Suisse and has held a variety of senior portfolio management, trading, strategy and risk advisory positions at firms such as BlackRock, Citigroup, and Oak Hill Platinum Partners. Mr. Peng holds a PhD in Applied Plasma Physics from the Massachusetts Institute of Technology and received his B.S. in Nuclear Engineering from Texas A&M University.

Mr. Peng is primarily responsible for the day-to-day management of the Fund and has served in such capacity since the Fund's inception in 2021.

Purchasing and Selling Fund Shares

Shares of the Fund are listed for trading on the Exchange. When you buy or sell the Fund's shares on the secondary market, you will pay or receive the market price. You may incur customary brokerage commissions and charges and may pay some or all of the spread between the bid and the offered price in the secondary market on each leg of a round trip (purchase and sale) transaction. The shares of the Fund will trade on the Exchange at prices that may differ to varying degrees from the daily NAV of such shares. A business day with respect to the Fund is any day on which the Exchange is open for business. The Exchange is generally open Monday through Friday and is closed on weekends and the following holidays: New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day.

The Fund's NAV is determined by dividing the total value of the Fund's portfolio investments and other assets, less any liabilities, by the total number of shares outstanding. NAV is determined each business day, normally as of the close of regular trading of the New York Stock Exchange (ordinarily 4:00 p.m., Eastern time).

In calculating NAV, the Fund generally values its investment portfolio at market price. If market prices are not readily available or the Fund reasonably believes that they are unreliable, such as in the case of a security value that has been materially affected by events occurring after the relevant market closes, the Fund is required to price those securities at fair value as determined in good faith using methods approved by the Board. Pursuant to the policies adopted by, and under the ultimate supervision of, the Board, these methods are implemented through the Trust's Fair Value Pricing Committee, members of which are appointed by the Board. The Fund's determination of a security's fair value price often involves the consideration of a number of subjective factors, and is therefore subject to the unavoidable risk that the value that the Fund assigns to a security may be higher or lower than the security's value would be if a reliable market quotation for the security was readily available.

There may be limited circumstances in which the Fund would price securities at fair value for stocks of U.S. companies that are traded on U.S. exchanges – for example, if the exchange on which a portfolio security is principally traded closed early or if trading in a particular security was halted during the day and did not resume prior to the time the Fund calculated its NAV. Fair value pricing involves subjective judgments and it is possible that a fair value determination for a security will materially differ from the value that could be realized upon the sale of the security.

You may obtain the current NAV of the Fund by calling 866-234-5426 or on the Fund's website at www.advocatecapmgt.com.

Payments to Financial Intermediaries

The Fund and/or the Adviser may compensate financial intermediaries for providing a variety of services to the Fund and/or its shareholders. Financial intermediaries include affiliated or unaffiliated brokers, dealers, banks (including bank trust departments), trust companies, registered investment advisers, financial planners, retirement plan administrators, insurance companies, and any other institution having a service, administration, or any similar arrangement with the Fund, its service providers or their respective affiliates. This section briefly describes how financial intermediaries may be paid for providing these services. For more information, please see "Payments to Financial Intermediaries" in the SAI.

Distribution Plan

The Fund has adopted a distribution plan pursuant to Rule 12b-1 under the 1940 Act that allows the Fund to pay distribution and/or service fees for the sale and distribution of Fund shares, and for services provided to shareholders. No Rule 12b-1 fees are currently paid by the Fund, and there are no plans to impose these fees. However, in the event Rule 12b-1 fees are charged in the future, because these fees are paid out of the Fund's assets on an on-going basis, over time these fees will increase the cost of your investment and may cost you more than paying other types of sales charges. The maximum annual Rule 12b-1 fee is 0.25% of the average daily net assets of the Fund.

The implementation of any payments under the distribution plan must be approved by the Board prior to implementation.

Payments by the Adviser

From time to time, the Adviser and/or its affiliates, in their discretion, may make payments to certain affiliated or unaffiliated financial intermediaries to compensate them for the costs associated with distribution, marketing, administration and shareholder servicing support for the Fund. These payments are sometimes characterized as "revenue sharing" payments and are made out of the Adviser's and/or its affiliates' own legitimate profits or other resources, and may be in addition to any payments made to financial intermediaries by the Fund. A financial intermediary may provide these services with respect to Fund shares sold or held through programs such as retirement plans, qualified tuition programs, fund supermarkets, fee-based advisory or wrap fee programs, bank trust programs, and insurance (e.g., individual or group annuity) programs. In addition, financial intermediaries may receive payments for making shares of the Fund available to their customers or registered representatives, including providing the Fund with "shelf space," placing it on a preferred or recommended fund list, or promoting the Fund in certain sales programs that are sponsored by financial intermediaries. To the extent permitted by SEC and Financial Industry Regulatory Authority ("FINRA") rules and other applicable laws and regulations, the Adviser and/or its affiliates may pay or allow other promotional incentives or payments to financial intermediaries.

The level of payments made by the Adviser and/or its affiliates to individual financial intermediaries varies in any given year and may be negotiated on the basis of sales of Fund shares, the amount of Fund assets serviced by the financial intermediary or the quality of the financial intermediary's relationship with the Adviser and/or its affiliates. These payments may be more or less than the payments received by the financial intermediaries from other investment products and may influence a financial intermediary to favor the sales of certain investment products over others. In certain instances, the payments could be significant and may cause a conflict of interest for your financial intermediary. Any such payments will not change the NAV or price of the Fund's shares. Please contact your financial intermediary for information about any payments it may receive in connection with the sale of Fund shares or the provision of services to Fund shareholders.

In addition to these payments, your financial intermediary may charge your account fees, commissions or transaction fees for buying or selling shares of the Fund, or other fees for servicing your account. Your financial intermediary should provide a schedule of its fees and services to you upon request.

Other Policies

Excessive Trading Policies and Procedures

The Fund does not impose any restrictions on the frequency of purchases and redemptions of Creation Units; however, the Fund reserves the right to reject or limit purchases at any time as described in the SAI. When considering that no restriction or policy was necessary, the Board evaluated the risks posed by arbitrage and market timing activities, such as whether frequent purchases and redemptions would interfere with the efficient implementation of the Fund's investment strategy, or whether they would cause the Fund to experience increased transaction costs. The Board considered that, unlike traditional mutual funds, shares of the Fund are issued and redeemed only in large quantities of shares known as Creation Units available only from the Fund directly to Authorized Participants, and that most trading in the Fund occurs on the Exchange at prevailing market prices and does not involve the Fund directly. Given this structure, the Board determined that it is unlikely that trading due to arbitrage opportunities or market timing by shareholders would result in negative impact to the Fund or its shareholders. In addition, frequent trading of the Fund's shares by Authorized Participants and arbitrageurs is critical to ensuring that the market price remains at or close to NAV.

Dividends and Distributions

Fund Distributions

The Fund distributes its net investment income, if any, and makes distributions of its net realized capital gains, if any, at least annually. If you own Fund shares on the Fund's record date, you will be entitled to receive the distribution.

Dividend Reinvestment Service

Brokers may make available to their customers who own shares of the Fund the Depository Trust Company book-entry dividend reinvestment service. If this service is available and used, dividend distributions of both income and capital gains will automatically be reinvested in additional whole shares of the Fund purchased on the secondary market. Without this service, investors would receive their distributions in cash. To determine whether the dividend reinvestment service is available and whether there is a commission or other charge for using this service, consult your broker. Brokers may require the Fund's shareholders to adhere to specific procedures and timetables.

Tax Information

The following is a summary of some important U.S. federal income tax issues that affect the Fund and its shareholders. The summary is based on current tax laws, which may be changed by legislative, judicial or administrative action. You should not consider this summary to be a comprehensive explanation of the tax treatment of the Fund, or the tax consequences of an investment in the Fund. Your investment in the Fund may have other tax implications. More information about taxes is located in the SAI.

You are urged to consult your tax adviser regarding specific questions as to federal, state and local income taxes.

Tax Status of the Fund

The Fund intends to elect and to qualify each year for the special tax treatment afforded to RICs under the Code. If the Fund maintains its qualification as a RIC and meets certain minimum distribution requirements, then the Fund is generally not subject to tax at the fund level on income and gains from investments that are timely distributed to shareholders. However, if the Fund fails to qualify as a RIC or to meet minimum distribution requirements it would result (if certain relief provisions were not available) in fund-level taxation and consequently a reduction in income available for distribution to shareholders.

Unless you are a tax-exempt entity or your investment in Fund shares is made through a tax-deferred retirement account, such as an IRA, you need to be aware of the possible tax consequences when the Fund makes distributions, you sell Fund shares, and you purchase or redeem Creation Units (Authorized Participants only).

Tax Status of Distributions

- The Fund intends to distribute for each year on an annual basis substantially all of its net investment income and net capital gains income.
- Dividends and distributions are generally taxable to you whether you receive them in cash or reinvest them in additional shares.
- The income dividends you receive from the Fund may be taxed as either ordinary income or "qualified dividend income." Dividends that are reported by the Fund as qualified dividend income are generally taxable to non-corporate shareholders at a maximum tax rate currently set at 20% (lower rates apply to individuals in lower tax brackets). Qualified dividend income generally is income derived from dividends paid to the Fund by U.S. corporations or certain foreign corporations that are either incorporated in a U.S. possession or eligible for tax benefits under certain U.S. income tax treaties. In addition, dividends that the Fund receives in respect of stock of certain foreign corporations may be qualified dividend income if that stock is readily tradable on an established U.S. securities market. For such dividends to be taxed as qualified dividend income to a non-corporate shareholder, the Fund must satisfy certain holding period requirements with respect to the underlying stock and the non-corporate shareholder must satisfy holding period requirements with respect to his or her ownership of the Fund's shares. Holding periods may be suspended for these purposes for stock that is hedged. Distributions that the Fund receives from an ETF or an underlying fund taxable as a RIC will be treated as qualified dividend income only to the extent so reported by such ETF or underlying fund. The Fund's investment strategies will significantly limit its ability to make distributions eligible for treatment as qualified dividend income.

- Taxes on distributions of capital gains (if any) are determined by how long the Fund owned the investments that generated them, rather than how long a shareholder has owned its shares. Sales of assets held by the Fund for more than one year generally result in long-term capital gains and losses, and sales of assets held by the Fund for one year or less generally result in short-term capital gains and losses. Distributions from the Fund's net capital gain (the excess of the Fund's net long-term capital gains over its net short-term capital losses) are taxable as long-term capital gains regardless of how long you have owned your shares. For non-corporate shareholders, long-term capital gains are generally taxable at a maximum tax rate currently set at 20% (lower rates apply to individuals in lower tax brackets). Distributions from the Fund's short-term capital gains are generally taxable as ordinary income.
- Corporate shareholders may be entitled to a dividends received deduction for the portion of dividends they receive from the Fund that are attributable to dividends received by the Fund from U.S. corporations, subject to certain limitations. The Fund's investment strategies will significantly limit its ability to distribute dividends eligible for the dividends received deduction for corporate shareholders.
- In general, your distributions are subject to federal income tax for the year in which they are paid. However, distributions paid in January but declared by the Fund to shareholders of record in October, November or December of the previous year will be treated as having been received by shareholders on December 31 of the calendar year in which declared, and thus may be taxable to you in the previous year.
- You should note that if you purchase shares just before a distribution, the purchase price would reflect the amount of the upcoming distribution. In this case, you would be taxed on the entire amount of the distribution received, even though, as an economic matter, the distribution simply constitutes a return of your investment. This is known as "buying a dividend" and should be avoided by taxable investors.
- The Fund (or your broker) will inform you of the amount and character of any distributions shortly after the close of each calendar year.

Tax Status of Share Transactions

Each sale of Fund shares will generally be a taxable event. Any capital gain or loss realized upon a sale of Fund shares is generally treated as a long-term gain or loss if the shares have been held for more than twelve months. Any capital gain or loss realized upon a sale of Fund shares held for twelve months or less is generally treated as short-term gain or loss. Any capital loss on the sale of shares held for six months or less is treated as long-term capital loss to the extent distributions of long-term capital gain were paid (or treated as paid) with respect to such shares. Any loss realized on a sale will be disallowed to the extent shares of the Fund are acquired, including through reinvestment of dividends, within a 61-day period beginning 30 days before and ending 30 days after the disposition of shares. The ability to deduct capital losses may be limited.

The cost basis of shares of the Fund acquired by purchase will generally be based on the amount paid for the shares and then may be subsequently adjusted for other applicable transactions as required by the Code. The difference between the selling price and the cost basis of shares generally determines the amount of the capital gain or loss realized on the sale or exchange of shares. Contact the broker through whom you purchased your shares to obtain information with respect to the available cost basis reporting methods and elections for your account.

An Authorized Participant who exchanges securities for Creation Units generally will recognize gain or loss from the exchange. The gain or loss will be equal to the difference between (i) the market value of the Creation Units at the time of the exchange plus any cash received in the exchange and (ii) the exchanger's aggregate basis in the securities surrendered plus any cash paid for the Creation Units. An Authorized Participant who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between (i) the Authorized Participant's basis in the Creation Units and (ii) the aggregate market value of the securities and the amount of cash received. The Internal Revenue Service ("IRS"), however, may assert that a loss that is realized upon an exchange of securities for Creation Units may not be currently deducted under the rules governing "wash sales" (for a person who does not mark-to-market their holdings), or on the basis that there has been no significant change in economic position. Authorized Participants should consult their own tax advisor with respect to whether wash sales rules apply and when a loss might be deductible.

The Fund may pay the redemption price for Creation Units at least partially with cash, rather than the delivery of a basket of securities. The Fund may be required to sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize investment income and/or capital gains or losses that it might not have recognized if it had completely satisfied the redemption in-kind. As a result, the Fund may be less tax efficient if it includes such a cash payment than if the in-kind redemption process was used.

To the extent the Fund invests in foreign securities, it may be subject to foreign withholding taxes with respect to dividends or interest the Fund received from sources in foreign countries.

Net Investment Income Tax

U.S. individuals with income exceeding \$200,000 (\$250,000 if married and filing jointly) are subject to a 3.8% tax on all or a portion of their "net investment income," which includes interest, dividends, and certain capital gains (including certain capital gain distributions and capital gains realized on the sale of shares of the Fund). This 3.8% tax also applies to all or a portion of the undistributed net investment income of certain shareholders that are estates and trusts.

Non-U.S. Investors

If you are a nonresident alien individual or a foreign corporation, partnership, trust or estate, (i) the Fund's ordinary income dividends distributed to you will generally be subject to a 30% U.S. withholding tax, unless a lower treaty rate applies but (ii) gains from the sale or other disposition of your shares of the Fund generally are not subject to U.S. taxation, unless you are a nonresident alien individual who is physically present in the U.S. for 183 days or more per year. The Fund may, under certain circumstances, report all or a portion of a dividend as an "interest-related dividend" or a "short-term capital gain dividend," which would generally be exempt from this 30% U.S. withholding tax, provided certain other requirements are met. Foreign shareholders who fail to provide an applicable IRS form may be subject to backup withholding on certain payments from the Fund. Backup withholding will not be applied to payments that are subject to the 30% (or lower applicable treaty rate) withholding tax described in this paragraph. Different tax consequences may result if you are a foreign shareholder engaged in a trade or business within the United States or if you are a foreign shareholder entitled to claim the benefits of a tax treaty.

Backup Withholding

The Fund (or financial intermediaries, such as brokers, through which shareholders own shares) generally is required to withhold and to remit to the U.S. Treasury a percentage of the taxable distributions and the sale or redemption proceeds paid to any shareholder who fails to properly furnish a correct taxpayer identification number, who has under-reported dividend or interest income, or who fails to certify that the shareholder is not subject to such withholding.

The foregoing discussion summarizes some of the consequences under current U.S. federal income tax law of an investment in the Fund. It is not a substitute for personal tax advice. Consult your personal tax advisor about the potential tax consequences of an investment in the Fund under all applicable tax laws.

More information about taxes is in the SAI.

Additional Information

Continuous Offering

The method by which Creation Units are purchased and traded may raise certain issues under applicable securities laws. Because new Creation Units are issued and sold by the Fund on an ongoing basis, at any point a “distribution,” as such term is used in the Securities Act of 1933 (the “Securities Act”), may occur. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the Prospectus delivery and liability provisions of the Securities Act.

For example, a broker-dealer firm or its client may be deemed a statutory underwriter if it takes Creation Units after placing an order with the Fund’s distributor, breaks them down into individual shares, and sells such shares directly to customers, or if it chooses to couple the creation of a supply of new shares with an active selling effort involving solicitation of secondary market demand for shares of the Fund. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker-dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to categorization as an underwriter.

Broker-dealer firms should also note that dealers who are not “underwriters” but are effecting transactions in shares of the Fund, whether or not participating in the distribution of such shares, are generally required to deliver a prospectus. This is because the prospectus delivery exemption in Section 4(a)(3) of the Securities Act is not available with respect to such transactions as a result of Section 24(d) of the 1940 Act. As a result, broker dealer-firms should note that dealers who are not underwriters but are participating in a distribution (as contrasted with ordinary secondary market transactions) and thus dealing with shares of the Fund that are part of an “unsold allotment” within the meaning of Section 4(a)(3)(C) of the Securities Act would be unable to take advantage of the prospectus delivery exemption provided by Section 4(a)(3) of the Securities Act. Firms that incur a prospectus delivery obligation with respect to shares of the Fund are reminded that under Rule 153 under the Securities Act, a prospectus delivery obligation under Section 5(b)(2) of the Securities Act owed to an exchange member in connection with a sale on the Exchange is satisfied by the fact that the Fund’s Prospectus is available on the SEC’s electronic filing system. The prospectus delivery mechanism provided in Rule 153 is only available with respect to transactions on an exchange.

Premium/Discount Information

Information regarding how often the shares of the Fund traded on the Exchange at a price above (*i.e.*, at a premium) or below (*i.e.*, at a discount) the NAV of the Fund for various time periods can be found at www.advocatecapmgt.com.

Contractual Arrangements

The Trust enters into contractual arrangements with various parties, including, among others, the Fund’s investment adviser, custodian, transfer agent, accountants, administrator and distributor, who provide services to the Fund. Shareholders are not parties to, or intended (or “third-party”) beneficiaries of, any of those contractual arrangements, and those contractual arrangements are not intended to create in any individual shareholder or group of shareholders any right to enforce the terms of the contractual arrangements against the service providers or to seek any remedy under the contractual arrangements against the service providers, either directly or on behalf of the Trust.

This prospectus and the SAI provide information concerning the Trust and the Fund that you should consider in determining whether to purchase shares of the Fund. The Fund may make changes to this information from time to time. Neither this prospectus, the SAI or any document filed as an exhibit to the Trust’s registration statement, is intended to, nor does it, give rise to an agreement or contract between the Trust or the Fund and any shareholder, or give rise to any contract or other rights in any individual shareholder, group of shareholders or other person other than any rights conferred explicitly by federal or state securities laws that may not be waived.

Financial Highlights

Because the Fund has not commenced operations as of the date of this prospectus, financial highlights are not available.

The Advisors' Inner Circle Fund III
ADVOCATE RISING RATE HEDGE ETF

Investment Adviser

Advocate Capital Management, LLC
499 Park Ave, Tenth Floor
New York, NY 10022

Distributor

SEI Investments Distribution Co.
One Freedom Valley Drive
Oaks, Pennsylvania 19456

Legal Counsel
